

Project 3a/3b – Performance Metrics

Presented below are general performance concepts to be further refined by project team that would evolve into measureable metrics:

1. Increase consistency among municipal storm water compliance strategies in permits throughout the state,
2. Improve our understanding of watershed tools, assumptions, inputs outputs as well as the uncertainty associated with these tools as applied to storm water management,
3. Improve public perception and confidence in application of watershed management tools in support of water quality improvement.
